## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1, 2, 3, 5, 6, 7, 10 and 13 (renumbered 1 – 8) are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The present invention of claims 1, 2, 3, 5, 6, 7, 10 and 13 is directed to a recording apparatus for recording motion image data onto a disc-like recording medium, the apparatus comprising: a file generating unit that forms the motion image data into a file according to a procedure relating to QuickTime file format

Independent claim 1 identifies the unique distinct feature "wherein the recording unit records the first and second files such that dummy data of the first file is recorded in the first recording area during stand-by of recording of the motion image data, the second file is recorded in the second recording area during recording of the motion image data, and the first file is recorded in the first recording area instead of the dummy data recorded therein after the recording of the motion image data is completed."

The closest prior art, Makoto et al (JP 2001-084705) disclose a recording apparatus for recording motion image data onto a disc-like recording medium the recording apparatus comprising: a file generating unit that forms the motion image data into a file according to a procedure relating to QuickTime file format (paragraph 13, file generating machine); and recording unit that affects recording of the file generated by the file generating (paragraph 17), unit such that the file is recorded as a first file including reference information of the motion image data included in the file (paragraphs 33 and 58) and a second file including the motion image data included in the file, in a first and second recording areas on the disc-like recording medium (paragraph 15).

Makoto et al however fails to anticipate or render the above mentioned underlined limitations obvious.

Hence claim 1 is allowed.

Since claims 2, 3 and 5 - 7 are dependent on claim 1, therefore they are allowed.

Independent claim 10 identifies the unique distinct feature "wherein the recording step records the first and second files such that recording dummy data of the first file is recorded in the first recording area during stand-by of recording of the motion image data, the second file is recorded in the second recording area during recording of the motion image data, and the first file is recorded in the first recording area instead of the dummy data recorded therein after the recording of the motion image data is completed."

Hence claim 10 is allowed.

Independent claim 13 identifies the unique distinct feature "wherein the recording-controlling step records the first and second files such that recording dummy data of the first file is recorded in the first recording area during stand-by of recording of the motion image data, the second file is recorded in the second recording area during recording of the motion image data, and the first file is recorded in the first recording area instead of the dummy data recorded therein after the recording of the motion image data is completed."

Hence claim 13 is allowed.

Therefore claims 1, 2, 3, 5, 6, 7, 10 and 13 are allowed over prior art.
